HOW TO BROWSE SECURELY

Following these simple steps can help you avoid cybersecurity pitfalls when browsing online.

HEED BROWSER WARNINGS

If you get a warning message when you attempt to visit a website, find another site to get the information you want or check with your security manager.

CHECK FOR ENCRYPTION

The padlock image or https:// in the URL is a reasonable sign that the data being transferred is protected.

GET APPROVAL FIRST

Before downloading any software, check your company policy or get authorization.

STAY UPDATED

Once you've installed software, make sure it always has the latest patches and updates.
