

## Cybersecurity for Healthcare Providers

**Haven™ is the all-in-one cybersecurity solution that ensures your patient data is protected and you are compliant.**

A medical office with spotty cybersecurity can leave patient data wide open for hackers to hold it for ransom, sell it or alter it. Not only does this cause major problems for patients but financial disaster for the business, which suffers from lost patients, a bad reputation, and fines for HIPAA requirement violations that can reach into the millions.

Haven is an end-to-end solution that protects medical organizations like yours from cyberattacks, data leakage, and breaches. You can rest assured that your patient data is protected and your organization is compliant.

### Why Haven™?

With a multilayered, proactive security solution in place, your patients are protected.

- **PREVENTION FIRST:** Prevent attacks, rather than relying on human intervention after a breach occurs
- **24x7x365 SECURITY:** Our SOC team detects, responds, contains and remediates threats. You would need to employ 4-6 cybersecurity experts, monitoring all day, every day, to get the same protection
- **ALL-IN-ONE:** Haven integrates it all for you and continually provides updates with the latest, most effective technology
- **WHITE-GLOVE SERVICE:** We provide “virtual CISO” advisory services and real people to talk to when you need help
- **EMPLOYEE TRAINING:** Simulated phishing exercises and micro-lessons to reduce human error and increase internet safety
